Introduction

FOREWORD

This manual is written for an experienced technician. Essential tools required in performing certain service work are identified in this manual and are recommended for use.

Live with safety: Read the safety messages in the introduction of this manual and the cautions presented throughout the text of the manual.

This is the safety-alert symbol. When you see this symbol on the machine or in this manual, be alert to the potential for personal injury.

Use this component technical manual in conjunction with the machine technical manual. An application listing in the introduction identifies product-model/component type-model relationship. See the machine technical manual for information on component removal and installation, and gaining access to the components.

This manual is divided in two parts: repair and operation and tests. Repair sections contain

necessary instructions to repair the component. Operation and tests sections help you identify the majority of routine failures quickly.

Information is organized in groups for the various components requiring service instruction. At the beginning of each group are summary listings of all applicable essential tools, service equipment and tools, other materials needed to do the job, service parts kits, specifications, wear tolerances, and torque values.

Component Technical Manuals are concise service guides for specific components. Component technical manuals are written as stand-alone manuals covering multiple machine applications.

Fundamental service information is available from other sources covering basic theory of operation, fundamentals of troubleshooting, general maintenance, and basic type of failures and their causes.

JOHN DEERE ENGINE OWNER:

Don't wait until you need warranty or other service to meet your local John Deere Engine Distributor or Service Dealer.

Learn who he is and where he is. At your first convenience, go meet him. He'll want to get to know you and to learn what your needs might be.

UTILISATEURS DE MOTEURS JOHN DEERE:

N'attendez pas d'être obligé d'avoir recours à votre Concessionnaire ou Point de Service le plus proche pour vous adresser à lui.

Renseignez-vous dès que possible pour l'identifier et le localiser. A la première occasion, prenez contact avec lui et faites-vous connaître. Il sera lui aussi heureux de faire votre connaissance et de savoir que vous pourrez compter sur lui le moment venu.

AN DEN BESITZER DES JOHN DEERE MOTORS:

Warten Sie nicht auf einen evt. Reparaturfall um den nächstgelegenen John Deere Händler kennen zu lernen.

Machen Sie sich bei ihm bekannt und nutzen Sie sein "Service Angebot".

PROPRIETARIO DEL MOTORE JOHN DEERE:

Non aspetti fino a quando ha bisogno della garanzia o di un altro tipo di assistenza per incontrarsi con il Suo Concessionario che fornisce l'assistenza tecnica.

Impari a conoscere chi è e dove si trova. Alla Sua prima occasione cerchi d'incontrarlo. Egli desidera farsi conoscere e conoscere le Sue necessità.

PROPIETARIO DE EQUIPO JOHN DEERE:

No espere hasta necesitar servicio de garantía o de otro tipo para conocer a su Distribuidor de Motores John Deere o al Concesionario de Servicio.

Entérese de quién es, y dónde está situado. Cuando tenga un momento, vaya a visitarlo. A él le gustará conocerlo, y saber cuáles podrían ser sus necesidades.

JOHN DEERE MOTORÄGARE:

Vänta inte med att besöka Din John Deere återförsäljare till dess att Du behöver service eller garanti reparation.

Bekanta Dig med var han är och vem han är. Tag första tillfälle att besöka honom. Han vill också träffa Dig för att få veta vad Du behöver och hur han kan hjälpa Dig.

Dealer Presentation Sheet

JOHN DEERE DEALERS

IMPORTANT: The changes listed below make your current CTM obsolete. Discard CTM42, dated 02 NOV 92. Please copy this page and route through your service department.

- Engine application charts updated to include the latest product models. See ENGINE APPLICATION CHART in Group 01.
- Engine coolant information revised. See ENGINE COOLANT RECOMMENDATIONS in Group 02.
- Recommendation to use ONLY JDG23 Lifting Sling and Deere provided lifting straps for lifting engines. Also recommend the use of SAE Grade 8 or higher grade cap screws and Loctite 242 when installing engine lifting straps added to Group 03.
- New “TORQUE-TO-YIELD” instructions for tightening cylinder head cap screws marked “SPECIAL” added to Group 05.
- Valve lift specifications revised in Group 05 and Group 16.
- Piston ring end gap specifications for new pistons have been added to Group 10.
- A revised (longer) JDG681A Tap for cleaning deeper tapped cylinder head cap screw holes in block added to Group 10.
- Use of JDG796 Alignment Tool for installing crankshaft rear oil seal housing added to Group 15.
- Detailed instructions for inspection of the vibration damper and the crankshaft dowel pin added to Group 15.
- Timing gear cover and rear oil seal housing replacement procedures for 6076HRW33, 34, and 35 Engines (equipped with structural front frame/oil sump), with engine installed in vehicle added to Group 15.
- Camshaft lobe lift specifications and valve lift specifications revised in Group 16.
- Recommendation against disassembly of the engine oil pump added to Group 20.
- Instructions for installation of structural front frame/oil sump on engines used in 8000 series tractors added to Group 20.
- Information and specifications for fan drive assembly with press-fit fan spacer added to Group 25.
- Torque specifications for turbocharger oil inlet line added to Group 30.
- Information to help identify A-Series and P-Series fuel injection pumps and fuel supply pumps added to Group 35.
- Instructions for disassembly and assembly of the fuel check valve deleted from Group 35. The check valve has been replaced by a non-serviceable assembly.
- In Group 100 — Engine Tune-Up and Break-In, the paragraph titled ALTITUDE COMPENSATION GUIDELINE changed to EFFECTS OF TEMPERATURE AND ALTITUDE ON ENGINE PERFORMANCE.
- In Group 105, the recommended temperatures and engine speeds for checking engine oil pressure revised. The procedure to pressure test the cooling system and radiator cap also revised.
- Dynamic timing procedure using TIME TRAC® timing kit to accurately check and adjust (rotary) injection pump-to-engine timing added to Group 115.
- Instructions and specifications for check and adjustment of the fuel shut-off solenoid added to Group 115.
- Instructions for changing 6076 generator set engines with mechanical governor from rated speed of 1800 RPM (60 Hz) to 1500 RPM (50 Hz) added to Group 115.

TIME TRAC® is a registered trademark of Stanadyne Automotive Corp.

ABOUT THIS MANUAL

This component technical manual covers the recommended repair procedure for 6076, 7.6 L (466 cu. in.) diesel engines produced in Waterloo, Iowa beginning with Engine Serial No. (500000—).

Before beginning repair of an engine, clean the engine and mount on a repair stand. (See Group 03 - Engine Mounting.)

Direction of engine crankshaft rotation in this manual is referenced facing the flywheel looking toward the fan. Front of engine is fan drive end.

Some components of this engine may be serviced without removing the engine from the machine. Refer to the specific machine technical manuals for information on components that can be serviced without removing the engine from the machine and for engine removal and installation procedures.

Read each module completely before performing any service.

Remove Front Wear Sleeve (With Timing Gear Cover Installed or Removed)	15-17	Install Front Wear Sleeve	15-48
Install Front Wear Sleeve (With Timing Gear Cover Installed)	15-17	Install Front Oil Seal (With Timing Gear Cover Installed)	15-49
Install Front Oil Seal (With Timing Gear Cover Installed)	15-18	Install Damper Pulley Assembly	15-49
Replace Timing Gear Cover (6076HRW33, 34, and 35 Engines) —Engine Installed in Vehicle	15-19	Install SAE 3 Flywheel Housing	15-50
Remove Timing Gear Cover	15-20	Install Flywheel	15-51
Inspect, Measure and Repair Flywheel	15-20	Install SAE 1 and SAE 2 Flywheel Housing	15-51
Check Flywheel Housing Face Run-Out	15-21	Complete Final Assembly	15-52
Check Flywheel Face Flatness	15-21		
Check Pilot Bearing Bore Concentricity	15-22	Group 16—Camshaft and Timing Gear Train	
Remove Flywheel	15-22	Special or Essential Tools	16-1
Remove SAE 1 and SAE 2 Flywheel Housing	15-23	Service Equipment and Tools	16-3
Remove SAE 3 Flywheel Housing	15-23	Other Material	16-3
Replace Flywheel Ring Gear	15-24	Camshaft and Timing Gear Train Specifications	16-4
Replace Rear Oil Seal Housing (6076HRW33, 34, and 35 Engines) —Engines Installed in Vehicle	15-25	Check Valve Lift	16-6
Remove Rear Oil Seal Housing and Wear Sleeve (With Engine Disassembled)	15-26	Check Camshaft End Play	16-7
Remove Crankshaft Main Bearings	15-27	Remove Damper Pulley and Timing Gear Cover	16-7
Check Main Bearing Clearance	15-28	Measure Camshaft Drive Gear-to-Crankshaft Gear Backlash	16-8
Remove Crankshaft	15-29	Remove Camshaft	16-9
Inspect Crankshaft	15-30	Remove Camshaft Gears	16-11
Measure Assembled ID of Bearings And OD Of Crankshaft Journals	15-32	Measure Thrust Washer Thickness	16-11
Main Bearing Cap Line Bore Specifications	15-33	Inspect and Measure Camshaft Followers	16-12
Crankshaft Grinding Guidelines	15-34	Visually Inspect Camshaft	16-12
Thrust Bearing New Part Specifications	15-36	Measure Camshaft Journal OD and Bushing ID	16-13
Crankshaft Grinding Specifications	15-37	Measure Camshaft Lobe Lift	16-13
Replace Crankshaft Oil Pump Drive Gear	15-38	Install Camshaft Gears	16-14
Replace Crankshaft Gear	15-39	Service Camshaft Bushings using JDG602 Adapter Set	16-15
Inspect Thrust Bearings	15-40	Service Camshaft Bushings using JDG606 Adapter Set	16-17
Remove and Clean Piston Cooling Orifices	15-40	Install Camshaft	16-18
Install Main Bearings and Crankshaft	15-41	Install Thrust Washer and Timing Gear Cover	16-20
Install Crankshaft Rear Oil Seal Housing	15-43	Install Front Oil Seal (With Timing Gear Cover Installed)	16-21
Check Oil Seal Housing Runout	15-45	Complete Final Assembly	16-22
Crankshaft Rear Oil Seal And Wear Sleeve Handling Precautions	15-46		
Install Crankshaft Rear Oil Seal and Wear Sleeve Assembly	15-47	Group 20—Lubrication System	
Install Timing Gear Cover	15-48	Other Material	20-1
		Lubrication System Specifications	20-1
		Drain Engine Oil and Remove Oil Pan	20-2
		Oil Filter and Oil Conditioning Housing Assembly	20-3

HANDLE FLUIDS SAFELY—AVOID FIRES

When you work around fuel, do not smoke or work near heaters or other fire hazards.

Store flammable fluids away from fire hazards. Do not incinerate or puncture pressurized containers.

Make sure machine is clean of trash, grease, and debris.

Do not store oily rags; they can ignite and burn spontaneously.

DX,FLAME -19-04JUN90

00
-UN-23AUG88
TS227

PREVENT BATTERY EXPLOSIONS

Keep sparks, lighted matches, and open flame away from the top of battery. Battery gas can explode.

Never check battery charge by placing a metal object across the posts. Use a volt-meter or hydrometer.

Do not charge a frozen battery; it may explode. Warm battery to 16°C (60°F).

DX,SPARKS -19-03MAR93

-UN-23AUG88
TS204

PREPARE FOR EMERGENCIES

Be prepared if a fire starts.

Keep a first aid kit and fire extinguisher handy.

Keep emergency numbers for doctors, ambulance service, hospital, and fire department near your telephone.

DX,FIRE2 -19-03MAR93

-UN-23AUG88
TS291

PREVENT ACID BURNS

Sulfuric acid in battery electrolyte is poisonous. It is strong enough to burn skin, eat holes in clothing, and cause blindness if splashed into eyes.

Avoid the hazard by:

1. Filling batteries in a well-ventilated area.
2. Wearing eye protection and rubber gloves.
3. Avoiding breathing fumes when electrolyte is added.
4. Avoiding spilling or dripping electrolyte.
5. Use proper jump start procedure.

If you spill acid on yourself:

1. Flush your skin with water.
2. Apply baking soda or lime to help neutralize the acid.
3. Flush your eyes with water for 15—30 minutes. Get medical attention immediately.

If acid is swallowed:

1. Do not induce vomiting.
2. Drink large amounts of water or milk, but do not exceed 2 L (2 quarts).
3. Get medical attention immediately.

TS203 -JUN-23AUG88

DX,POISON -19-21APR93

AVOID HIGH-PRESSURE FLUIDS

Escaping fluid under pressure can penetrate the skin causing serious injury.

Avoid the hazard by relieving pressure before disconnecting hydraulic or other lines. Tighten all connections before applying pressure.

Search for leaks with a piece of cardboard. Protect hands and body from high pressure fluids.

If an accident occurs, see a doctor immediately. Any fluid injected into the skin must be surgically removed within a few hours or gangrene may result. Doctors unfamiliar with this type of injury should reference a knowledgeable medical source. Such information is available from Deere & Company Medical Department in Moline, Illinois, U.S.A.

WEAR PROTECTIVE CLOTHING

Wear close fitting clothing and safety equipment appropriate to the job.

Prolonged exposure to loud noise can cause impairment or loss of hearing.

Wear a suitable hearing protective device such as earmuffs or earplugs to protect against objectionable or uncomfortable loud noises.

Operating equipment safely requires the full attention of the operator. Do not wear radio or music headphones while operating machine.

DX,WEAR -19-10SEP90

-JUN-23AUG88
TS206

SERVICE MACHINES SAFELY

Tie long hair behind your head. Do not wear a necktie, scarf, loose clothing, or necklace when you work near machine tools or moving parts. If these items were to get caught, severe injury could result.

Remove rings and other jewelry to prevent electrical shorts and entanglement in moving parts.

DX, LOOSE -19-04JUN90

TS228 -UN-23AUG88

WORK IN VENTILATED AREA

Engine exhaust fumes can cause sickness or death. If it is necessary to run an engine in an enclosed area, remove the exhaust fumes from the area with an exhaust pipe extension.

If you do not have an exhaust pipe extension, open the doors and get outside air into the area.

DX, AIR -19-04JUN90

TS220 -UN-23AUG88

WORK IN CLEAN AREA

Before starting a job:

- Clean work area and machine.
- Make sure you have all necessary tools to do your job.
- Have the right parts on hand.
- Read all instructions thoroughly; do not attempt shortcuts.

DX, CLEAN -19-04JUN90

T6642EJ -UN-18OCT88

REMOVE PAINT BEFORE WELDING OR HEATING

Avoid potentially toxic fumes and dust.

Hazardous fumes can be generated when paint is heated by welding, soldering, or using a torch.

Do all work outside or in a well ventilated area. Dispose of paint and solvent properly.

Remove paint before welding or heating:

- If you sand or grind paint, avoid breathing the dust. Wear an approved respirator.
- If you use solvent or paint stripper, remove stripper with soap and water before welding. Remove solvent or paint stripper containers and other flammable material from area. Allow fumes to disperse at least 15 minutes before welding or heating.

DX,PAINT -19-03MAR93

TS220 -UN-23AUG88

AVOID HEATING NEAR PRESSURIZED FLUID LINES

Flammable spray can be generated by heating near pressurized fluid lines, resulting in severe burns to yourself and bystanders. Do not heat by welding, soldering, or using a torch near pressurized fluid lines or other flammable materials. Pressurized lines can be accidentally cut when heat goes beyond the immediate flame area.

DX,TORCH -19-03MAR93

TS953 -UN-15MAY90

ILLUMINATE WORK AREA SAFELY

Illuminate your work area adequately but safely. Use a portable safety light for working inside or under the machine. Make sure the bulb is enclosed by a wire cage. The hot filament of an accidentally broken bulb can ignite spilled fuel or oil.

DX,LIGHT -19-04JUN90

TS223 -UN-23AUG88

USE PROPER LIFTING EQUIPMENT

Lifting heavy components incorrectly can cause severe injury or machine damage.

Follow recommended procedure for removal and installation of components in the manual.

DX,LIFT

-19-04JUN90

TS226
-UN-23AUG88

PRACTICE SAFE MAINTENANCE

Understand service procedure before doing work. Keep area clean and dry.

Never lubricate, service, or adjust machine while it is moving. Keep hands, feet, and clothing from power-driven parts. Disengage all power and operate controls to relieve pressure. Lower equipment to the ground. Stop the engine. Remove the key. Allow machine to cool.

Securely support any machine elements that must be raised for service work.

Keep all parts in good condition and properly installed. Fix damage immediately. Replace worn or broken parts. Remove any buildup of grease, oil, or debris.

Disconnect battery ground cable (-) before making adjustments on electrical systems or welding on machine.

DX,SERV

-19-03MAR93

TS218
-UN-23AUG88

USE PROPER TOOLS

Use tools appropriate to the work. Makeshift tools and procedures can create safety hazards.

Use power tools only to loosen threaded parts and fasteners.

For loosening and tightening hardware, use the correct size tools. DO NOT use U.S. measurement tools on metric fasteners. Avoid bodily injury caused by slipping wrenches.

Use only service parts meeting John Deere specifications.

DX,REPAIR -19-04JUN90

00
7
-UN-08NOV89
TS779

DISPOSE OF WASTE PROPERLY

Improperly disposing of waste can threaten the environment and ecology. Potentially harmful waste used with John Deere equipment include such items as oil, fuel, coolant, brake fluid, filters, and batteries.

Use leakproof containers when draining fluids. Do not use food or beverage containers that may mislead someone into drinking from them.

Do not pour waste onto the ground, down a drain, or into any water source.

Air conditioning refrigerants escaping into the air can damage the Earth's atmosphere. Government regulations may require a certified air conditioning service center to recover and recycle used air conditioning refrigerants.

Inquire on the proper way to recycle or dispose of waste from your local environmental or recycling center, or from your John Deere dealer.

DX,DRAIN -19-03MAR93

-UN-26NOV90
TS1133

LIVE WITH SAFETY

Before returning machine to customer, make sure machine is functioning properly, especially the safety systems. Install all guards and shields.

DO NOT use these values if a different torque value or tightening procedure is given for a specific application. Torque values listed are for general use only. Check tightness of fasteners periodically.

Fasteners should be replaced with the same or higher grade. If higher grade fasteners are used, these should only be tightened to the strength of the original.

Shear bolts are designed to fail under predetermined loads. Always replace shear bolts with identical grade.

Make sure fasteners threads are clean and that you properly start thread engagement. This will prevent them from failing when tightening.

Tighten plastic insert or crimped steel-type lock nuts to approximately 50 percent of the dry torque shown in the chart, applied to the nut, not to the bolt head. Tighten toothed or serrated-type lock nuts to the full torque value.

^a "Lubricated" means coated with a lubricant such as engine oil, or fasteners with phosphate and oil coatings. "Dry" means plain or zinc plated without any lubrication.

^b Grade 2 applies for hex cap screws (not hex bolts) up to 152 mm (6-in.) long. Grade 1 applies for hex cap screws over 152 mm (6-in.) long, and for all other types of bolts and screws of any length.
